

Zipwhip Enum API

Zipwhip's Enum API gives developers access to critical information about the phone numbers they are interacting with. For example, if you want to only add the "Text Me" button in your CRM software when the recipient's number is a mobile number then you would use Zipwhip's isMobile API.

Using isMobile

The most basic enum call Zipwhip offers, is the number a mobile number?

Parameters

Parameter	Required	Description
api_key	True	api_key is provided by Zipwhip.
phone_number	True	The number to be looked up. In E.164 format.

Example Request

```
$ curl -G https://provision.zipwhip.com/api/20140925/enum/mobile \
-d api_key=[api_key] \
-d phone_number=[phone_number]
```

Example Response - It is a Mobile Number

```
{
  "transaction_id": "5dcfdcf7-1839-84bb-asdf-172bdf32d8e6",
  "is_mobile": true
}
```

Example Response - It is Not a Mobile Number

```
{
  "transaction_id": "5dcfdcf7-1839-84bb-asdf-192bdf32d8e7",
  "is_mobile": false
}
```
